

Muhammad Arham Khan

Data Engineer | Lahore, Pakistan

+92 330 421 2884 | marhamkhan43@gmail.com | linkedin.com/in/arham-khan7 | github.com/M-ARHAM-KHAN-07 | m-arham-khan-07.github.io/portfolio

PROFESSIONAL SUMMARY

Data Engineer specializing in ETL/ELT pipeline design, cloud data warehousing, and BI reporting for enterprise clients. Skilled in Python, SQL, Apache Airflow, dbt, AWS, and BigQuery, with a track record of root-causing data quality issues, building automated validation frameworks, and delivering Power BI and Metabase dashboards that drive executive decision-making.

SKILLS

Data Engineering: ETL/ELT Pipelines, Apache Airflow, dbt, SQL, Data Warehousing, Data Validation & QA, Google BigQuery, MySQL/MariaDB, OpenSearch, Fivetran, Zapier

Cloud & AWS: AWS Lambda, Step Functions, ECS/Fargate, ECR, S3, SES, RDS, EC2, Docker, Serverless Architecture

BI & Analytics: Metabase, Power BI, Looker Studio, Streamlit, Qlik, Mixpanel, KPI Reporting

Machine Learning: XGBoost, Random Forest, Regression, Feature Engineering, Computer Vision, NLP

Development: Python, Node.js, FastAPI, Flask, REST APIs, Web Scraping, Flutter, HTML/CSS

WORK EXPERIENCE

DotLabs — Data Engineer

July 2025 – Present

- Built and maintained Metabase BI dashboards for enterprise clients, writing complex SQL against BigQuery data warehouses; root-caused a critical KPI aggregation bug that had inflated a core delivery metric to 4,032%, correcting it to an accurate 85.6%.
- Architected a serverless AWS pipeline (SES → S3 → Lambda → Step Functions → ECS/Fargate → RDS) that ingests CSV attachments from inbound email, validates and transforms them in containerized jobs deployed via ECR, and loads results to RDS with automated status notifications.
- Designed automated data-validation workflows reconciling ad-platform exports against warehouse output at daily/ad-set granularity, achieving consistent accuracy within 2% and producing client-facing audit reports.
- Built Power BI dashboards for Escana (oil company), consolidating 5+ KPI streams into a single executive reporting view and reducing manual reporting effort by ~30%.
- Designed dbt transformation models and Apache Airflow DAGs for the Kasper project, reducing pipeline failures through automated orchestration.
- Engineered end-to-end ETL pipelines from web APIs to AWS EC2; trained an XGBoost price-prediction model and delivered results through a Streamlit application.
- Integrated pipelines from Stripe, RevenueCat, Amplitude, and BigQuery into a unified warehouse and built a Looker Studio dashboard for real-time analytics (Staffan).
- Automated multi-source data ingestion (Facebook/Google Ads, QuickBooks) into S3/Blob storage using Fivetran, eliminating manual data entry (DentalLook).

Askaan Tech Labs — Data / AI Engineer Intern

June 2024 – Sept 2024

- Developed and deployed regression models (Linear Regression, Random Forest) with cross-validation, outperforming baseline benchmarks.
- Performed end-to-end data preprocessing, including missing-value handling, outlier detection, and standardization, to ensure model-ready inputs.
- Conducted exploratory data analysis using statistical methods to drive feature engineering decisions.

EDUCATION

University of Central Punjab — B.S. Computer Science

Nov 2021 – July 2025

GPA: 3.74 / 4.0 | Relevant Coursework: Machine Learning, Deep Learning, Data Science, Databases, Big Data Analysis, Probability & Statistics
